

One-oh-One: Revolutionizing the Web3 Space

Join us in building the future of a decentralized digital world. One-oh-One is a cutting-edge Web3 ecosystem for **time-mining** and **tokenized photospheres**, unlocking new opportunities for content creators and investors.

One-oh-One

Creating the Future of a Seamless Decentralized
Digital Space

The First Web3 Ecosystem for Time-Mining and Tokenized
Photospheres

Problem

Unrealized Content Value

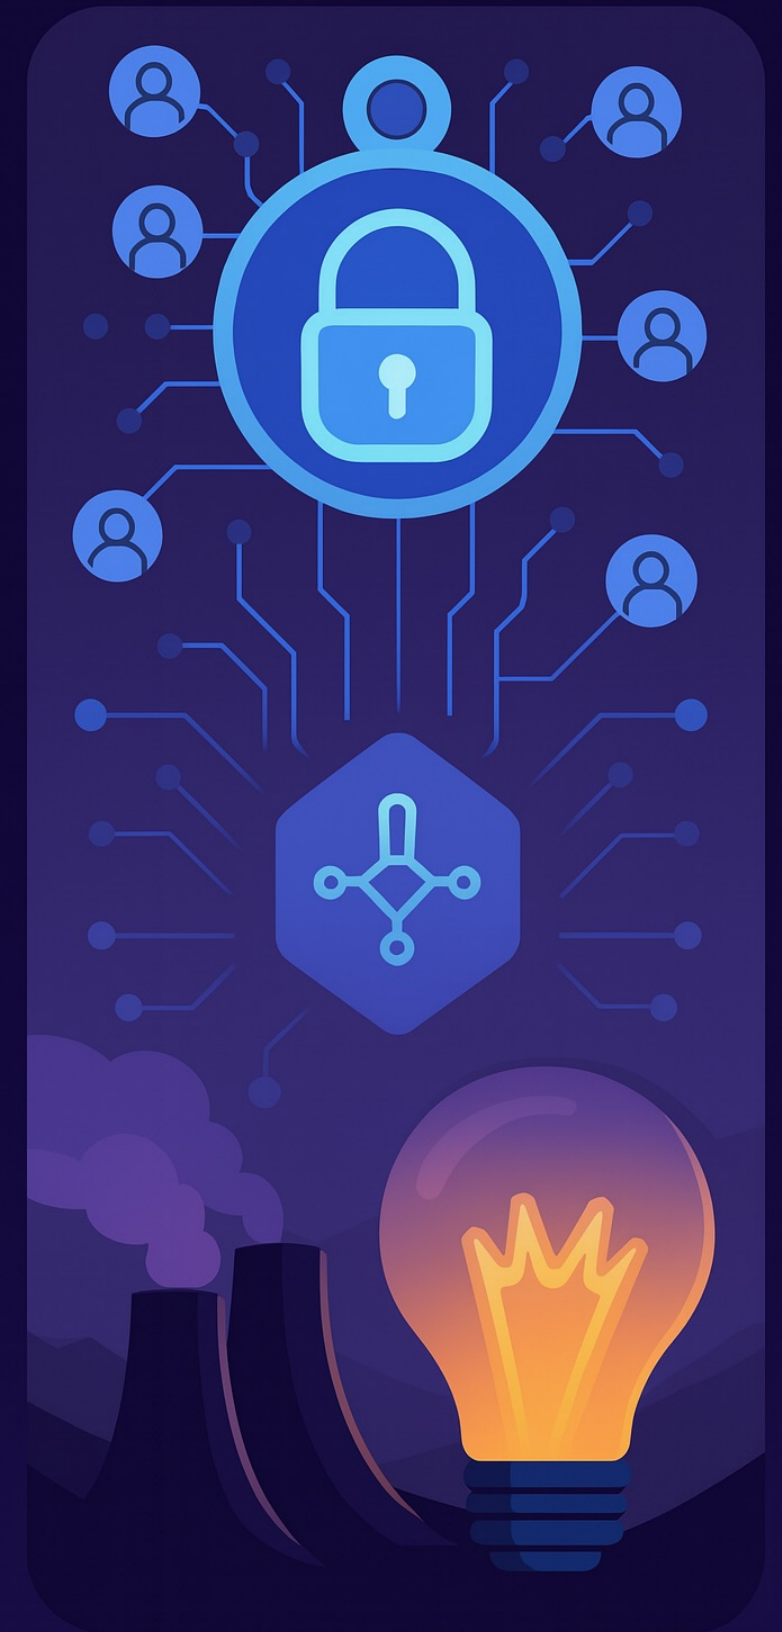

Billions of users create content daily, but most of its value remains unclaimed or unmonetized.

Centralization of Geospatial Data

Modern mapping and AR solutions are centralized, which limits user freedom and exposes data to risks.

Energy-Intensive Mining

Traditional cryptocurrency mining requires huge energy costs and high barriers to entry, which repels new participants.

Our Solution

One-oh-One combines **time-mining** and **tokenized photospheres** to create a decentralized digital space. Users create 360° photospheres, which are validated by NFT miners and integrated into a decentralized map, receiving rewards in **SATON** tokens.

User

Captures 360° photospheres

NFT Miner

Validates content and time

Global Map

Integrates verified photospheres

SATON Rewards

Rewards creators and miners

This innovative model ensures fair value distribution and stimulates the development of decentralized cartography.

Why Now?

1

AR/VR Market Boom

The augmented and virtual reality market is growing rapidly and will reach \$250 billion by 2030.

2

Scaling TON Blockchain

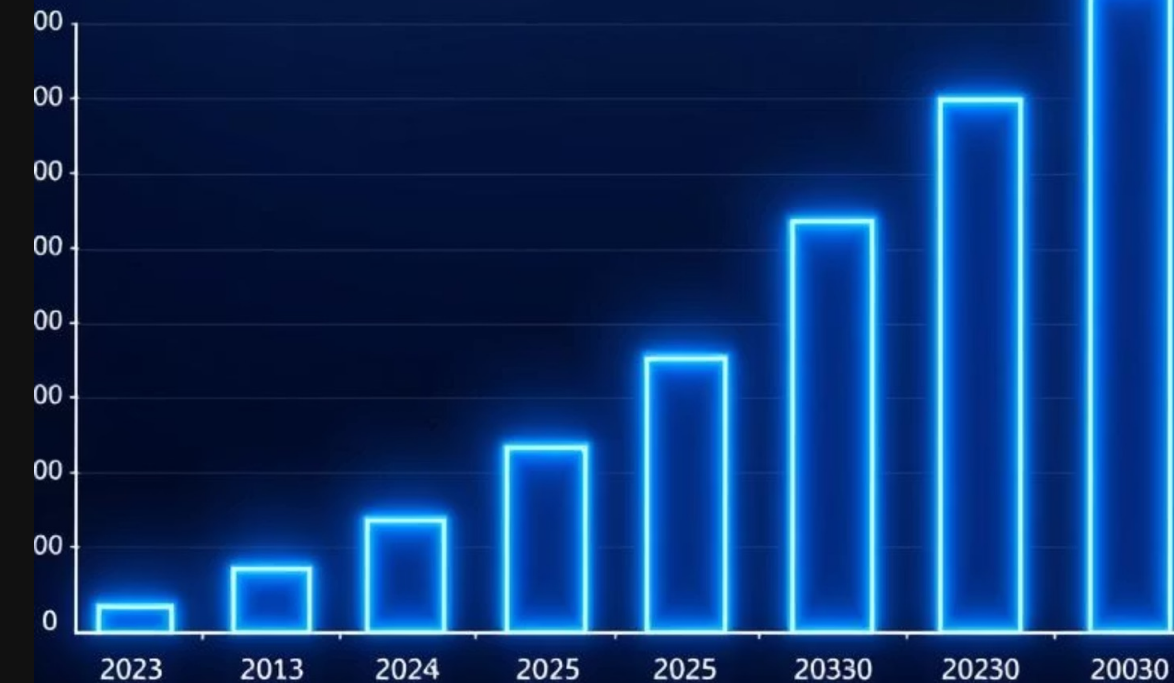

The TON blockchain demonstrates unprecedented scalability, ready for mass adoption of Web3 applications.

3

Telegram Mini Apps

Integration with Telegram Mini Apps provides instant access to an audience of over 900 million users.

How It Works

1. Capture 360° Photo

The user takes a 360° panoramic photo through our application.

3. NFT Miners Confirmation

Decentralized NFT miners verify the quality and value of the photosphere.

2. AI and Geolocation Validation

Artificial intelligence and geolocation data confirm the authenticity and uniqueness of the photosphere.

4. Adding to the Global Map

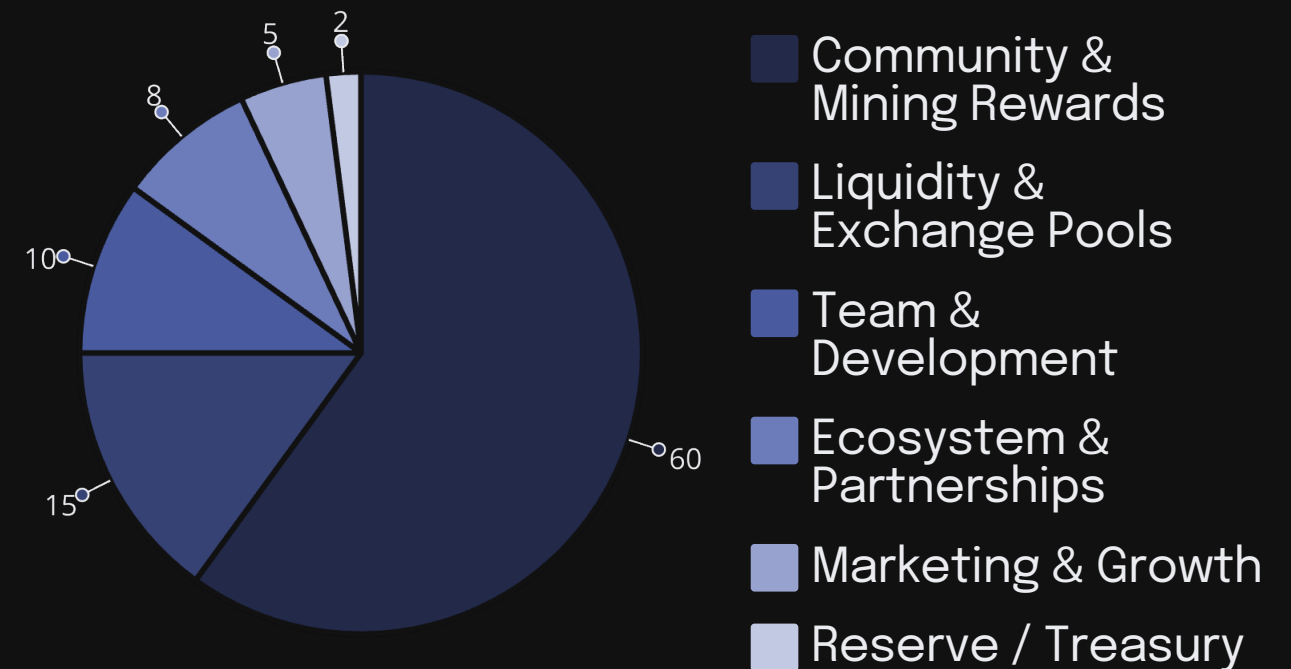

The validated photosphere is added to the decentralized global digital map, becoming part of the digital reality.

This process ensures the uniqueness and authenticity of each tokenized photosphere.

SATON Tokenomics

SATON is a utility token that underlies the One-oh-One ecosystem. It stimulates participation, provides governance, and supports a deflationary model.

- **Utility:** Rewards for time-mining, creating NFT miners, paying commissions in the ecosystem.
- **Deflationary:** Token burning mechanism when creating NFT miners and certain transactions.
- **Security:** The value of the token is supported by real content – unique tokenized photospheres.

Roadmap

Our strategic development plan for One-oh-One, presented in 4 phases.

Phase 1: Mining and NFT Launch

Implementation of time-mining mechanisms and launch of the first NFT collections for photosphere validation.

Phase 2: NFT Marketplace and Token Listing

Release of the SATON token and preparation for listing on DEX/CEX.

Phase 3: Tokenization of Photospheres

Implementation of full tokenization of 360° photospheres and their integration into a global map.

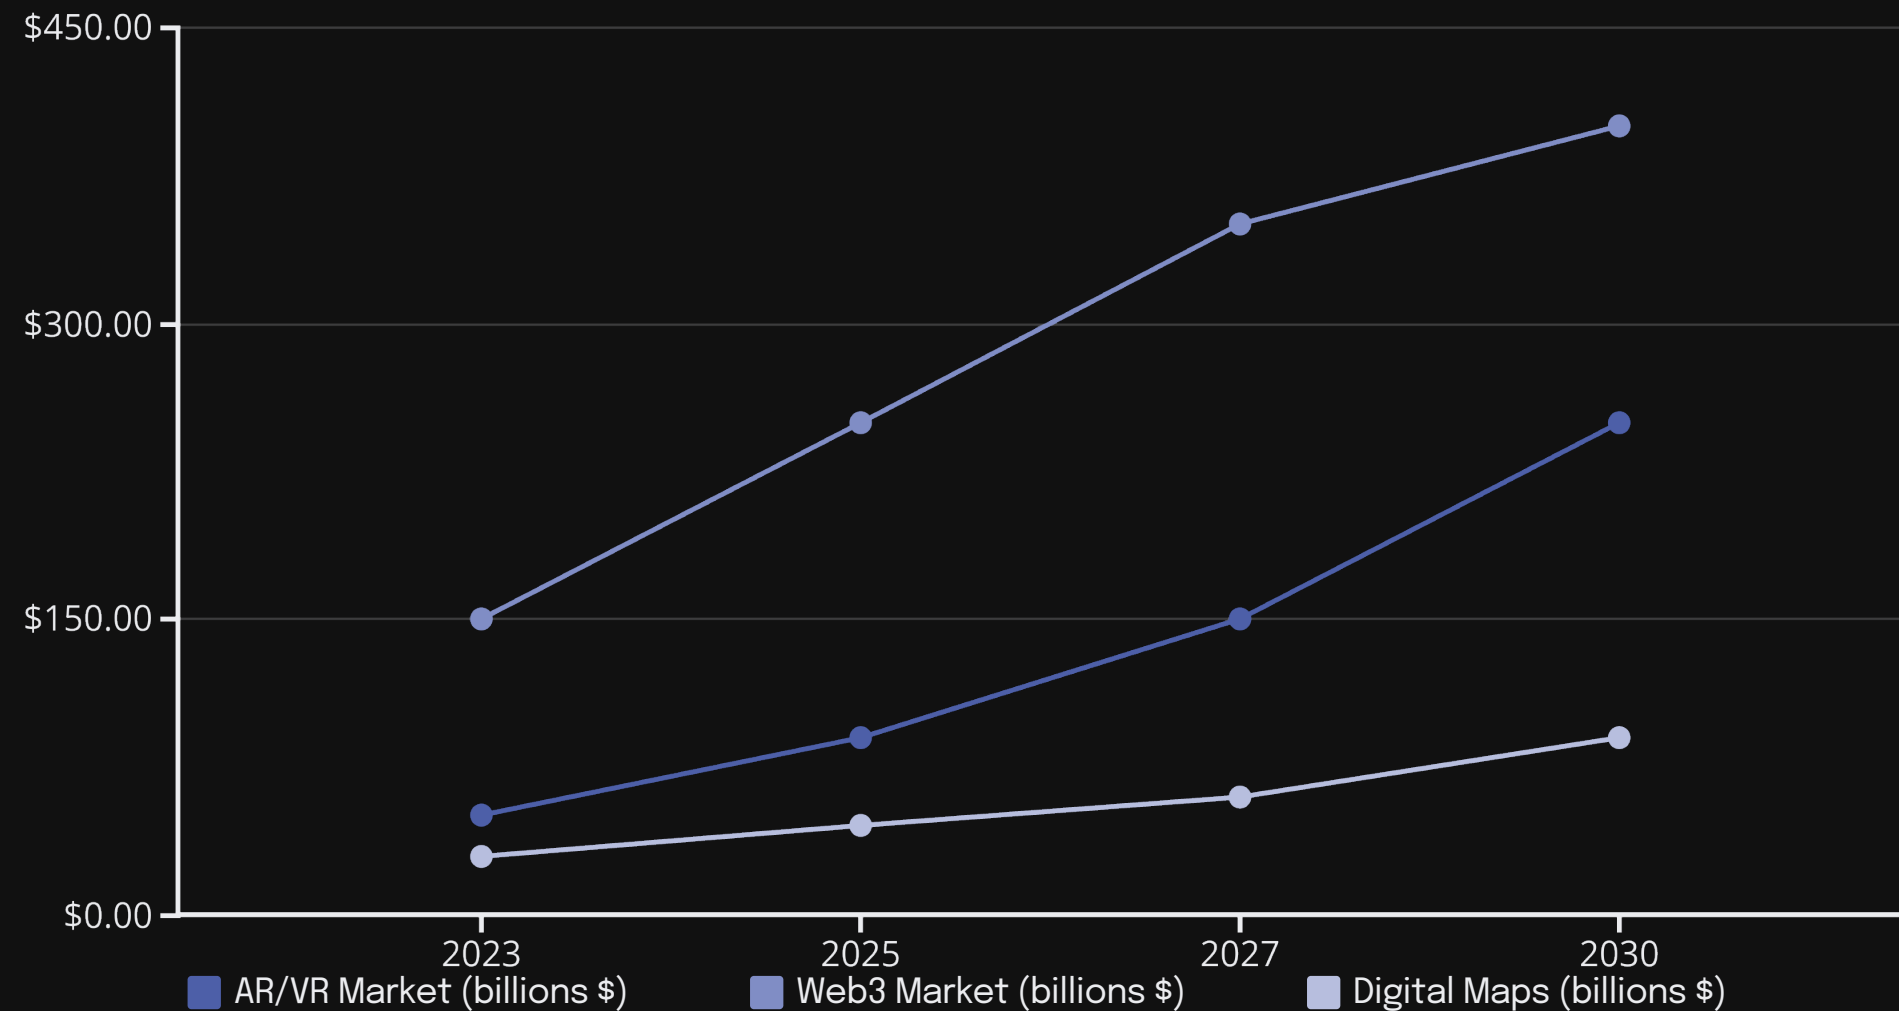

Phase 4: Global AR/VR Map

Creation of an interactive decentralized AR/VR map based on tokenized photospheres.

Market Opportunities

TAM: \$400B+ by 2030

One-oh-One is uniquely positioned at the intersection of three rapidly growing markets: AR/VR, Web3, and Digital Maps, which unlocks enormous potential for growth.

Our Team

We are a team of experienced professionals who have combined their knowledge to create an innovative Web3 future.

Blockchain Developers

Creators of reliable and scalable decentralized architecture.

AR/VR Engineers

Experts in augmented and virtual reality, bringing the digital world to life.

AI Specialists

Developers of intelligent algorithms for data validation and processing.

Growth Experts

Strategists ensuring rapid and effective project scaling.

Join us in building the next digital frontier

Take part in the blockchain revolution with One-Oh-One.
